## Project Tip

When connecting a tub faucet using CPVC pipe, we recommend using a CPVC transition adapter (1) and a 5/8"OD compression x MIP adapter (2). The transition adapter has a rubber washer on it which allows for expansion and contraction between the CPVC and Brass. If you use a CPVC male adapter only, you're likely to get weeping between the two fittings.

### Correct Way

### Wrong Way

### CPVC Transition Adapter
